# Eliminate Hand-Passing safety risks in the OR

One of the most common sources of sharps injuries in the OR is the hand-passing of sharps and other contaminated surgical instruments. OSHA law mandates a hands free technique, however consistent use of a neutral zone remains limited, and the incidence of injuries is continuing to increase.

Through its shielded clinical design, Bladesafe single-handedly combats the safety risks associated with the transfer, storage and disposal of sharps within a surgical setting.

As leaders in healthcare safety innovation,

we are passionate about designing solutions that protect the safety of healthcare workers. The Bladesafe is evidence of this — a product that disrupts high-risk handling practices, optimizes efficiencies and, above all, protects the lives of staff and patients.

**Sterility**  
**Assured**

The Daniels Bladesafe is supplied gamma-sterilized for safe handling in infection-risk areas.

## Safety engineered design

### ▶ **SAFE HANDLING**

The Bladesafe's smart design ensures sharps and blades evenly straddle the center finger recess (even short-handled scalpels), to enable risk-free hand-retrieval.

### ▶ **VERSATILE**

Accommodates all commonly used scalpel blades in operating rooms.

### ▶ **STABLE**

Bladesafe's wide base provides greater stability than trays, bowls or kidney dishes on uneven surfaces.

### ▶ **STRONG AND DURABLE**

Heavy-duty plastic is impervious to sharps but light to handle.

### ▶ **EASY DISPOSAL**

Designed for easy clean up; the Bladesafe can be disposed of after use.

# Bladesafe

## 6 UNIQUE FEATURES

The center recess facilitates effortless and safe grasping of scalpel handles, even with short-handled scalpels — protecting staff from cutting their fingers

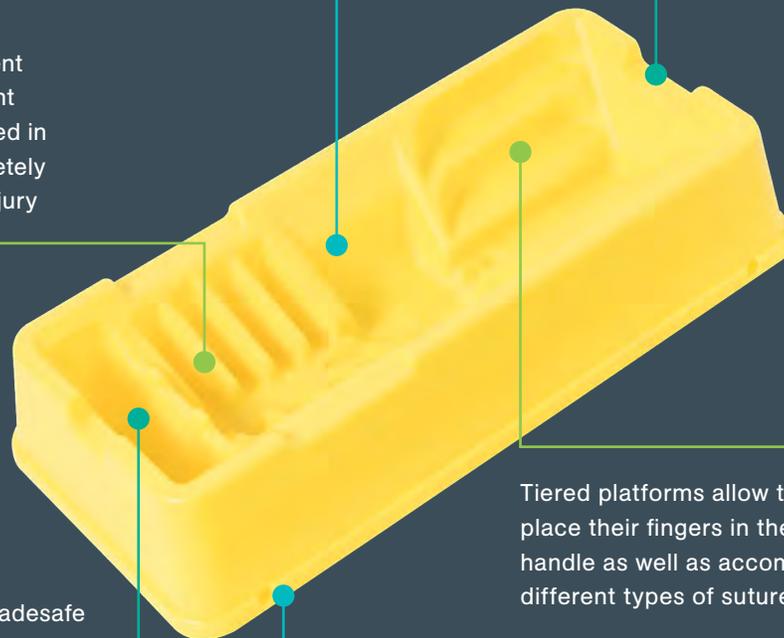

Notches at both ends allow for longer-handled scalpels to be placed in the tray

The four suture slots facilitate different types of suture needles (with different suture handle lengths) to be contained in the unit with the needle point completely recessed, thereby reducing risk of injury

Tiered platforms allow the user to easily place their fingers in the suture holder's handle as well as accommodating different types of suture needles

The large pocket at the end of the Bladesafe accommodates both suture needles over 1 inch and longer suture holders (6.5"+)

Bladesafe is easy to hold, particularly for a gloved and often slippery hand. You also have the option of holding Bladesafe from underneath so that the device completely shields your hand

## SPECIFICATIONS

### Supplied:

- Individually packed in easy-peel aseptic packaging
- Gamma-sterilized for single use only

### Other transfer uses:

- Laparoscopic Port Trocars
- K-Wires and Steinmen pins (up to 7.28" in length)
- Scalpel handles and blades
- Drain Trocars

### Accommodates the following:

- Scalpel handle sizes: 3, 4, 7, 9
- Blade range: 10, 11, 12, 15, 20, 21, 22, 23
- Suture Holders up to 20cm-8"

# Bladesafe Multi

## COUNTING TRAY

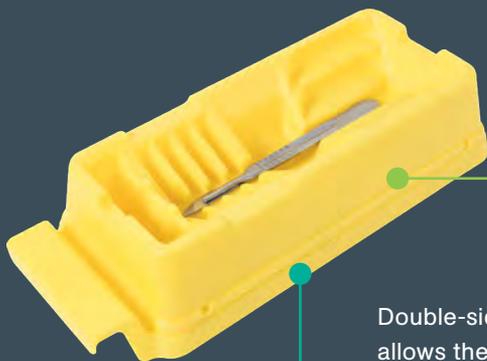

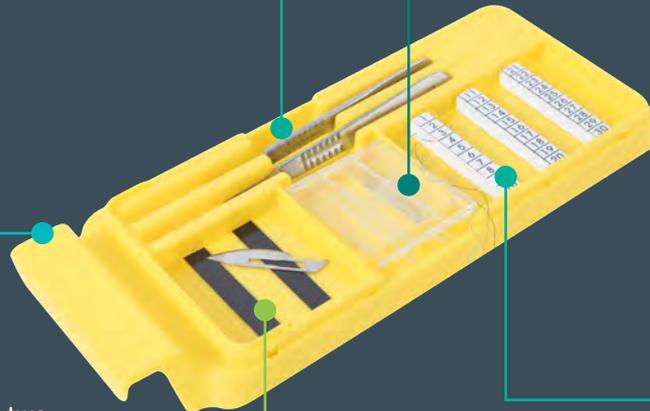

Two scalpel holders provide fitted storage for used scalpels waiting for disposal, or as safe placement for scalpels while in use

Three scalpel blade-removing pockets allow users to neutralize scalpels before disposal

Large handle enables the unit to be easy-to-grip between users, or secured when in use

This flat surface area fitted with two magnetic strips enables the safe keeping of additional scalpel blades

Three numbered foam strips facilitate the safe storage, counting, and disposal of suture needles, during and post procedure

Once the procedure is complete, the Bladesafe Tray clips snugly on top of the Counting Tray

Double-sided tape on the underside of the tray allows the unit to be firmly affixed to surfaces

## BLADESAFE & COUNTING TRAY

**Avoiding sharps injuries  
protects your staff and  
their families.**

## **Daniels Health.** At the forefront of healthcare innovation.

Established in 1986, Daniels Health has been at the forefront of healthcare safety innovation for over three decades. A local family owned business, Daniels was born out of a passion for minimizing the risks inflicted on healthcare professionals from unsafe sharps disposal, and this passionate aspiration remains a cornerstone of the company's practices thirty years on. With a range of patented safety devices designed to reduce needlestick injuries, minimize infection transfer risk, reduce environmental burden and provide heightened protection for users, Daniels Health is the unquestioned leader in sharps safety innovation.
