

Daniels Health Waste Processing Services

Your National Partner for Cost Effective Gate Waste Services

NATIONAL TREATMENT | EFFICIENT SCHEDULING | FULL SERVICE PARTNER

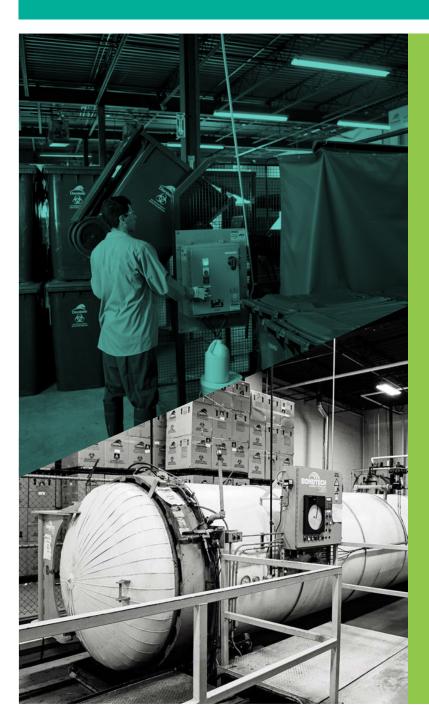

Waste Streams We Handle

Looking for a single vendor to handle all healthcare waste streams? With clinical experience? **Look no further.** With over 15 years experience in the management of healthcare generated waste across North America, Daniels Health is an industry expert in the regulatory compliance and governance of transporting, housing and treating medical waste.

Specializing in healthcare, Daniels Health is licensed and certified to transport and treat the following waste streams:

- Sharps Waste
- Regulated Medical Waste
- Non-hazardous Pharmaceutical Waste
- Trace Chemotherapy Waste

In addition, through our extensive relationship networks across the United States, Daniels can also facilitate hazardous waste management services, all centralized through a single-vendor partnership.

State of the Art Treatment Options

With processing and treatment options to handle all waste streams, Daniels' waste processing options are scalable to all sized facilities, scheduling requirements and waste volume demands.

At each of our processing facilities, Daniels boasts state of the art autoclaves with intelligent on-site processes that minimize risk and enable seamless transition of waste. Wherever possible, Daniels Health opts for non-incineration treatment technologies that support sustainability targets.

Daniels stands by sustainable treatment technologies that reduce landfill and minimize CO² burden.

We Understand What Drives You

As experienced operators in transport and scheduling, we understand your world. Our services are designed to optimize handling and treatment efficiencies, ensure the shortest turnaround time from drop-off to re-load, and provide peace of mind that all paperwork is validated and compliant. As your partner, we ensure the following:

Our communication with your staff and drivers is clear and transparent.

At our facilities, your trucks are processed as quickly as possible with timely scheduling and manifest sign-off.

We multiply your efficiency by handling, washing, bag-lining and replacing bins and collectors.

We offer bags, cardboard boxes, collectors and other consumables necessary for you to attain optimum service levels for your customers.

Competitive pricing driven by our national infrastructure, critical market mass, niche wastestream focus, economics of scale and operational efficiencies.

OUR KEY SERVICES

- Servicing across the United States
- Flexible pick-up and transport services
- Wide range of reusable containment systems for purchase and rental
- ► Ability to handle all waste streams
- ► State of the art autoclave processing
- Washing and bin-lining services

National Service Infrastructure. Partners in Logistics and Treatment

When it comes to transport and scheduling requirements, we offer a partnership, not a pre-packaged subscription. With a comprehensive national service infrastructure, designated transfer stations, and a strong national fleet, Daniels' offers tailored solutions that complement the geographical and transport capabilities of those we partner with. Pickup or drop-off scheduling at our licensed sites, variable treatment alternatives, bin washing services, and single-state or national coverage are all flexible options we offer.

We tailor our solutions to meet your needs.

Daniels entered the US healthcare market in 2003 as the clinical alternative for healthcare generated waste. Challenging the long-instilled practices of medical waste being managed through a back-of-dock service with no infection risk considerations, Daniels ushered in a new standard of risk prevention by putting safety, intelligent movement and clinical design at the forefront of its waste management products and practices.

With safety as our primary driver, Daniels has invested millions of dollars in R&D to develop world-leading leakproof containment systems, robotic washing processes with the highest levels of bacterial load reduction, and a suite of space-optimizing accessories that achieve hands-free operation, reduced cross-contamination, and point-of-use accessibility.

We recognize that a clinical environment requires a clinical solution, and safety in a fast-paced operating theatre or infection-sensitive isolation room is not simply a 'nice to have'.

Today, Daniels Health has the second largest service infrastructure for medical waste collection and treatment in the United States. With a strong national fleet, team of dedicated experts, and eighteen regional facilities that boast state of the art autoclaves, transfer and processing equipment, we have earned an industry-wide reputation of being a capable and reliable partner to waste generators and transporters alike.

If you are looking for a credible and trustworthy company that will minimize your exposure risk, consider Daniels Health for a safe and sustainable waste processing partnership.

Wide Range of Containment Solutions

With a wide range of collectors to suit all budget and volume requirements, we can partner with you in not only processing and treatment, but also in the containment of all healthcare generated waste streams.

Available for purchase or rental, our range of collectors are certified for containment of regulated medical waste, clinical sharps, trace chemotherapy, pharmaceutical and RCRA substances, and are clearly labeled and color-coded to achieve point-of-use recognition for optimum safety distinction.

In addition to our range of standard bins and tubs, Daniels' proprietary range of sharps and medical waste collectors are globally distinguished for their engineered safety and proven risk-reduction. Designed with over 13 safety features, the Daniels multi wastestream containment systems are engineered to reduce cross-contamination, pathogen build up and infection transfer risk. After each use, Daniels reusable collectors are returned to one of our licensed processing facilities where they undergo a 6-stage robotic wash process using environmentally friendly detergents.

testing, the Daniels wash process has been proven to achieve the highest degree of decontamination and microbiological efficacy without the use of harmful chemicals.

Engage with Daniels Health Today.
