

Clinic Battery Process

01

The standard collection container (pictured below) from IREQ (#510122) to collect spent/dead batteries in is reusable.

02

Once this container is full, the collection container should be brought to the room at the clinic where the Pharmaceutical (black box) Waste, Full Sharps Containers and Red infectious Waste is being stored for pick-up by our vendor Daniels and emptied into the 5 gallon Black Pail, which is provided by Daniels for the proper transport of batteries in their vehicles.

03

Please note that All NON-Alkaline and the 9V Alkaline batteries are required to be taped prior to placing them into the 5 gallon bucket transport container. AAA, AA, C & D alkaline batteries do not need to be taped.

04

Once the 5 gallon pail is FULL, they should contact the Daniels Environmental Services Specialist at **888-952-5580** or **hazwaste@danielshealth.com** to schedule the pick-up of the larger black bucket.
