

# Daniels Pharmaceutical Characterization Portal

A revolutionary online system for the proper identification, handling, transportation and disposal of hazardous drug waste.

**HEALTHCARE FACILITIES**

**LONG TERM CARE**

**DOCTORS OFFICES**

**VETERINARY**

**PHARMACY**

# Making drug waste compliance **easy** & **affordable**.

Approximately 5% of the average drug inventory is considered hazardous waste by the EPA. These drugs must be handled, managed, transported and disposed of as hazardous waste. Daniels Health Pharmaceutical Characterization Portal provides the tools necessary for your facility to be compliant with the EPA and DOT.

## Enter Your Inventory

Scan by UPC, enter by NDC or search by product name. Add and delete from the inventory as needed to reflect your current inventory. An accurate ongoing inventory is the first step in compliance.

## Print Reports

Reports include DOT Class and EPA Waste Codes of your inventory. Archived reports include P-Listed Weight Accumulation and Shipping History. Reports are useful during regulatory audits (EPA, DOT, State) and in the shipping of waste.

## Calculate P-Listed Weight

It is important for CESQG's to generate less than 1 KG of P-Listed (acute) waste. This feature allows you to log the amount of acute waste generated by your facility and the start to end accumulation dates.

## Document Generator Status

When audited by the EPA it is important to demonstrate how you've determined your generator status. This is especially true for CESQG's. This report shows the total acute waste generated and in what time periods.

## Email shipping requests

Simply select the drugs from your inventory you want to ship and press a button. An email will be sent to your designated waste vendor of the drugs you are sending them along with the relevant hazard classifications

## Recieve Email Alerts

Your inventory is monitored 24/7. You will be notified if there has been a regulatory change on the drug waste classifications of any item in your inventory. This ensures your inventory is always up to date with the most current information.

## Customize bin colors

When segregating waste prior to transport, it's helpful to use color coded bins. This feature allows you to custom select your bin colors for the various DOT Shipping Classes - Providing this type of visual reference can reduce shipping errors.

## Database Updates

Every time you log onto the portal, your current inventory database is re-evaluated and you have the most up to date hazardous waste classification information possible. This ensures that your drug classifications are current.

## Accuracy

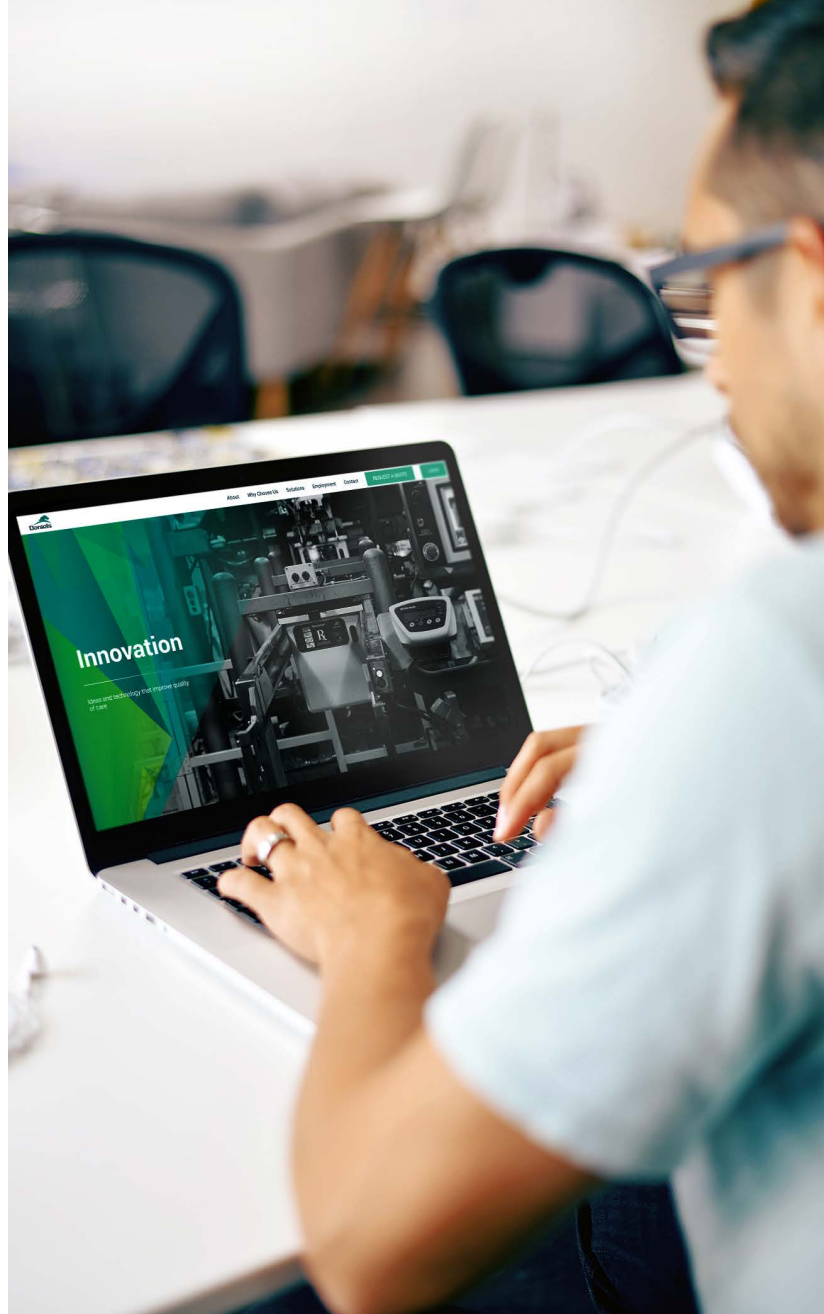

With over 30 years experience in pharmaceutical waste management, Daniels' Pharmaceutical waste portal combined with its in-service training offers customers industry-leading expertise in the classification and management of hazardous wastes.

# Login & get started today.

Our portal is easy to find so you can login anytime, anywhere.
